

Choose the **Best Protection System** for Your Business

CoreFlex

**Impact Resistant
Guarding System**

What Is CoreFlex?

Energy Absorbing Steel Guarding System

CoreFlex® is an energy absorbing steel guarding system that protects your equipment and personnel — and significantly reduces damage to your equipment, concrete floor, and foundation.

Patented CoreFlex guarding uses an innovative impact absorption system. During a collision, the kinetic energy of the impact is gradually absorbed by an elastomer in the base of the assembly. The post can tilt approximately 15° as it absorbs energy and softens the impact.

After the impact, the post returns upright. Your guard remains intact and ready to perform again.

**The flexibility
of polymer**

**The strength
of steel**

CoreFlex

CoreFlex Reduces Safety Risks and Damage

When you choose CoreFlex, you create a safer work environment. CoreFlex has the flexibility of polymer and the strength of steel. It's designed to absorb the impact from forklifts and other machinery. The result is a lower risk of injury and damage at your facility.

Consider what happens when a forklift collides with a static, immovable bollard. The impact will likely result in the forklift load toppling over. But with a CoreFlex guarding system, the risk of an accident is greatly reduced. When a collision occurs, CoreFlex's energy absorption characteristics help soften the impact. This prevents injuries to personnel and damage to your equipment, floor, and foundation.

Why Choose CoreFlex?

When you choose CoreFlex, you get a protection system you can rely on to

- protect your employees
- protect your equipment
- reduce damage to your walls, floor, and foundation

CoreFlex is an excellent safety solution for all types of facilities. All commercial and industrial properties can benefit from the protection provided by a CoreFlex system from Ontario Bollards.

A Durable, Modular Protection System

The CoreFlex protection system is completely modular and can be assembled to virtually any configuration you can imagine. CoreFlex's modular design makes it easy to build the best solutions to protect your people, equipment, and property. The experts at Ontario Bollards will make it easy for you to design your CoreFlex system to meet your unique needs.

CoreFlex is a durable, modular protection system. With its energy absorption characteristics, your CoreFlex protection system can handle repeated impact without becoming damaged. Your CoreFlex system will need much less maintenance or repair than conventional steel bollards — and that means lower maintenance costs.

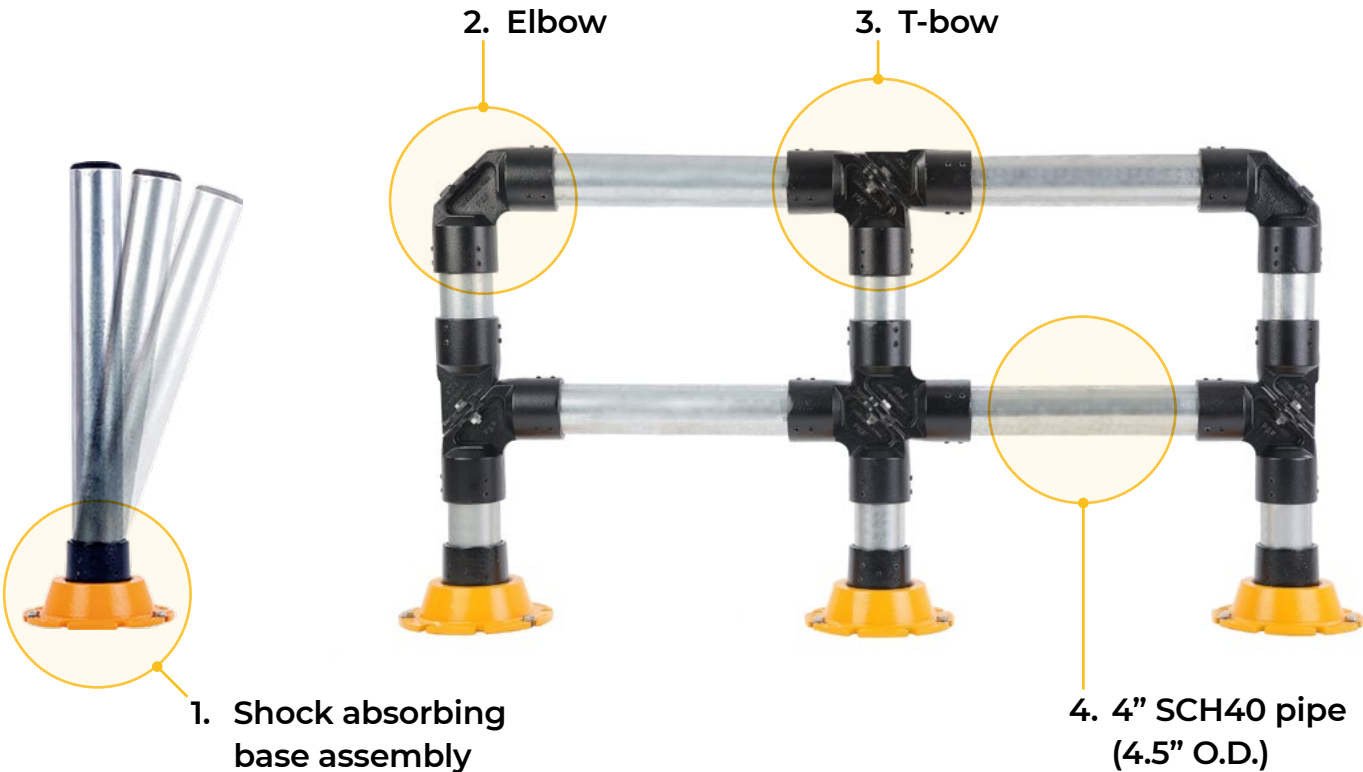

With the modular design, it's easy to replace any component that gets damaged. Ontario Bollards keeps all CoreFlex components in stock. You can get what you need right away instead of waiting for a custom order to be shipped.

CoreFlex Components

CoreFlex is a versatile and innovative safety solution with the flexibility of polymer and the strength of steel.

The modular CoreFlex system has four components:

CoreFlex in Action

CoreFlex's innovative absorption system works to protect your personnel and your floor, helping you to avoid expensive material and floor repairs.
